

Uplift of webforms

Te Tari Pūreke, The Firearms Safety Authority, is the regulator for firearms and restricted weapons in New Zealand.

In 2024 I led the design and delivery of a project to uplift an existing Drupal product, used by Firearms Dealers to record sales of firearms. The product needed to be extended to support recording ammunition sales. I utilised existing user research and feedback on the form to improve the experience alongside the required legislative changes.

- Removed redundant steps in the process
- Improved help text, placeholder text and labels to reduce common mistakes in data entry
- Added smart lookups to firearms information to improve data entry accuracy and efficiency
- Improved colour contrast according to WCAG 2.2 and government accessibility standard
- Updated look and feel to bring product inline with brand guidelines
- Improved responsive design to work better on the devices people are using
- Undertook usability testing with real users and adjusted the design based on feedback
- Worked with the Communications team to prepare advertorials supporting the legislation change

A couple of things are changing about ammunition and the Firearms Registry

From 24 June, 2025, some changes are happening relating to ammunition and the Firearms Registry. These will help us ensure ammunition is only being sold to current firearms licence holders, and support the smooth uptake of the Registry over the coming years. Here's what you need to know.

1. When buying ammunition, the sale will be recorded by the firearms dealer or ammunition seller

On and from 24 June 2025, the firearms dealer or ammunition seller selling you ammunition, must record the ammunition sale in the Firearms Registry using the online Dealer Transactions form. This is a record of the sale, not a registration of ammunition.

As the licence holder, you do not need to record the ammunition you purchase. The Arms Regulations say the firearms dealer or ammunition seller needs to record the sale. This is at the time the ammunition is dispatched or handed over, or immediately after. As a licence holder, you should expect that when you purchase ammunition you'll need to assist the dealer or ammunition seller with information required for the online Dealer Transactions form, for example, your firearms licence number.

2. The first time you buy ammunition, you'll need to register all your firearms – if you have not done so already

After 24 June 2025, licence holders will have an activating circumstance when they purchase ammunition from a firearms dealer or ammunition seller – if they haven't already had one. This means you will need to register all the firearms and arms items in your possession within 30 days of purchasing ammunition, if you haven't already registered your firearms. Once you have entered your details into the Firearms Registry, you must keep your information up to date when buying or selling arms items.

“The form is much better, it’s easier and quicker to use. I like how it’s more intuitive ... well done”

- User feedback following product improvements

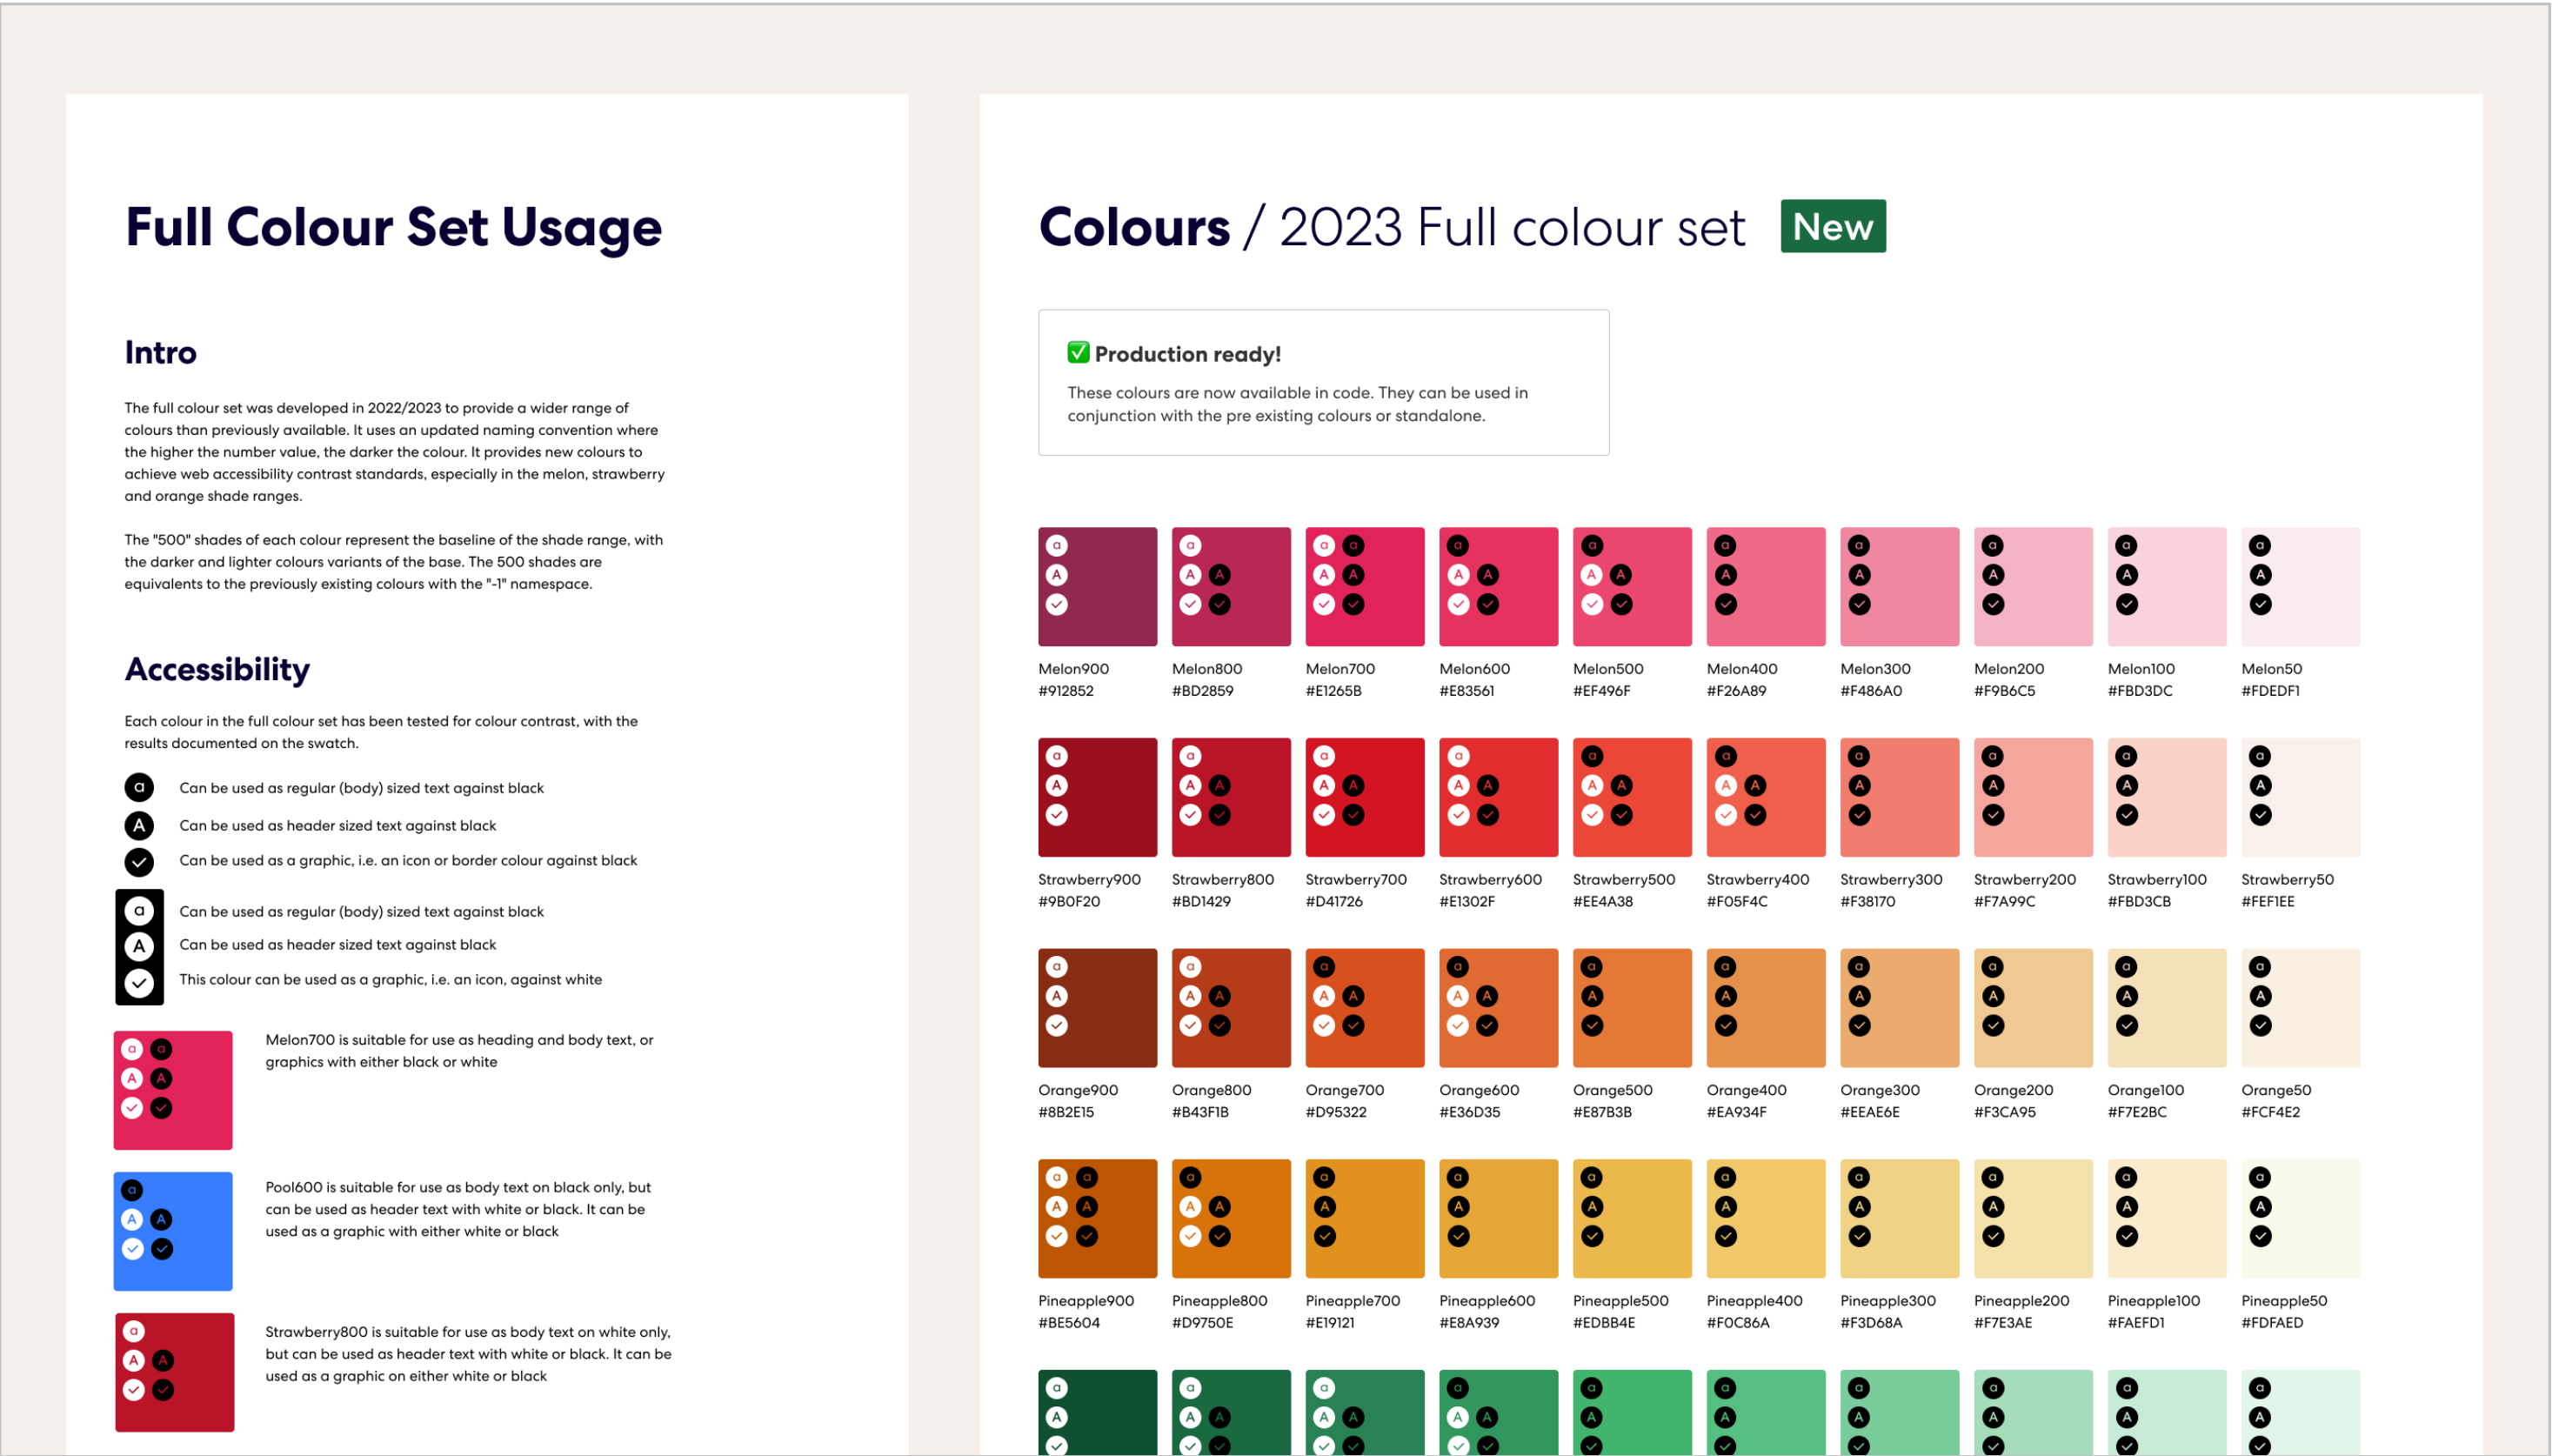

Updated Brand Colours

Sharesies is a wealth development platform dedicated to providing equal financial opportunities for all.

During my time as a senior product designer within the design system team, we completed uplifting and standardising a huge amount of components and creating documentation and relationships between different teams.

One major project I led was the uplift of the brand colours within the design system. The existing colours had been created as-needed throughout the initial start-up phase of the business, leaving gaps and inconsistencies. There were a lack of suitable colours available to create a dark mode for the product.

- Undertook research within the business to understand business needs surrounding colour
- Planned and facilitated multiple co-design workshops with other product designers to develop new colours
- Tested new colours extensively, including dark mode experiments
- Developed thorough documentation, including accessibility documentation
- Worked with the development team to implement the new colour system

MyACC Private Motor Vehicle Reimbursement

MyACC offers clients the ability to apply for reimbursement for trips they’ve had to take because of their injury. The main focus of the work was to enable automated processing of these requests, but the team also used it as an opportunity to improve the user experience.

- Completed a UX audit to identify opportunities to improve
- Talked with the business to understand common issues and complaints regarding the form and data accuracy
- Updated labels, help text and placeholder text to improve usability and accessibility
- Identified areas requiring updates to align with the design system Accent
- Removed a redundant step that prevented users from making a submission for more than one month at a time
- Planned and facilitated usability testing on the proposed designs
- Worked with the development team through delivery
